

Final Reflection of Human and Ethical Factors in Computer Science

How has your understanding of human and ethical factors in computer science evolved throughout this course?

I have learned so much about human and ethical factors through this course, for example I don't know about the principles of designing programmes and ethical principles. This course's vivid cases made me improve my understanding of ethical problems in data science.

Also, reflect on which topic or case study sparked the most interest for you and explain why it resonated with you.

- The most interesting topic of this course for me is the scenario group's case.
- Because it's collaborative and I've had strong participation during the process. My team members and I thought of our Newshack case together and communicated with different ideas. We have not met before but we could know each other well for we have a same destination. And thanks to this case study I gained the best team member I've ever had.
